

*Diesel Particulate Filter Cleaning is now available at two locations!*

*DPF Cleaning is required on 2007+ Engines.*

■ We've installed a top-of-the-line FSX system to clean the diesel particulate filter on most makes of engines/trucks. A dirty filter reduces engine performance and fuel mileage.

■ Most DPF filters can be cleaned to industry specs with our **Stage 1 Pneumatic Cleaner**. High-pressure air from both directions removes ash, etc. in about an hour.

■ For dirtier filters, our **Stage 2 Thermal Cleaner** burns away the ash via programmed, regulated heat without damaging the filter. The process takes overnight.

Thermal Cleaner    Ash Vacuum    Pneumatic Cleaner    Airflow Tester

## DPF Cleaning Services Are Now Available:

- The ash is removed by a vacuum.
- An Airflow Tester allows us to monitor DPF compliance with exhaust emissions regulations during the process.
- We recommend cleaning your DPF annually to maintain engine/filter performance and long life. Off-highway and local-delivery driving may require more frequent cleaning.
- Have your filter cleaned to ensure proper operation prior to the manufacturer's warranty expiration -- usually 250,000 miles.

**DPF Cleaning starts at \$625 (Stage 1 Cleaning / Cummins Engine)**

Includes removing DPF from truck, pneumatic cleaning and reinstallation. Job should take about three hours. Contact the Service Manager for details and to schedule a DPF cleaning.
